Energy Course Level 1

The solutions to the energy problems on earth are independent of religion and politics. However it is important to understand the religious and political aspects to understand the full picture of what is happening. Even so, it is still possible to understand the solutions to our energy problems and the reasons that created them without the background in religion or politics.

In this energy course we will look at how the N.W.O. is taking over our energy supplies as part of their full spectrum attack against the populations of earth. Their plan is to create a technocracy which is a technological dictatorship where they are in full control of every detail of your life. Controlling energy will allow the N.W.O. to control you by making you dependant on them for the energy you use to keep warm and cook your food or run your business. This plan of the N.W.O. to take over our energy supplies is tightly linked to their environmental plan. It is very useful to view the material in the environment course at Infowar School to better understand their energy control plan.

One important key to understanding their plan is how they have changed the timeline of earth's history using evolution. Evolution has been proven to be false and that can be seen in the evolution course at Infowar School. It is also important to understand the origin of creation which you can find in the religion course at Infowar School because the N.W.O. is a creation of the fallen angels that God cast out of heaven but you do not have to be a religious person or convert to any religion to understand what is happening or how to stop it. The reason that the origin of creation becomes important to the energy course and environmental course is because for those parts of the N.W.O. plan to work the earth's timeline has to be made to look like it is billions of years old.

The earth is only 6000 years old and there is a great deal of scientific evidence to prove it. We are told that coal and oil need thousands or even millions of years to be created but that is not true. Coal can be made in a week and oil can be made in about one hour. Even fossils can be made in a few months or up to one year, not millions of years. In the following topics we will look at how coal and oil are made in those short time periods.

Another important key to understanding how their plan works for taking over energy is to know how they are using carbon dioxide (co2) to make us think that oil, coal and natural gas are killing the earth. They tell us that co2 is harmful but it is not. It is part of the lifecycle. By taxing and limiting co2 the N.W.O. can control you and your energy and your food supply. The topic of co2 is covered in the environment course.

There Is No Energy Crisis and We Have More Energy Than We Need

You have been lied to for so long by the N.W.O. that it may be difficult for you to believe that there is no energy crisis or that we have all the energy we need. There is enough oil and natural gas in Alaska to power the United States of America for over two hundred years. And that includes any increases in productivity or populations. Please note that there is also no overpopulation crisis on earth which is shown in the environment course. The overpopulation claims the N.W.O. make are to make us think that we have to depopulate the earth which helps the N.W.O. take over. Also we have technologies that allow us to burn coal to make electricity without polluting the environment.

Oil wells in the ground are naturally refilling and there are huge amounts of oil and natural gas all over the world so there is no need to go to war over it. We also have clean nuclear energy but the more dangerous types are being used more often than the safe types. These topics of oil, natural gas and clean nuclear energy are covered in the later topics of this course.

Better Alternative than Windmills and Solar Panels

The Hydrogen Car

There are even other forms of alternative energy that are not being used as much as they should be or in ways that they should be used. There was a man named Stanley Meyer that invented a water fuel source that can be used to run a car and the only thing that comes out of the exhaust is water. The fuel source is the hydrogen from the water and when hydrogen burns it only produces water, no CO₂. This topic is explained more in the later topics of this course.

The Sterling Engine

The sterling engine is an external combustion engine that can run on any heat source from the sun to gasoline. Even a wood fire or propane can run the sterling engine. This engine was tested extensively by the United States air force and it was found to be more fuel efficient and cleaner than the cars we are using today. The sterling engine can also be used to create electricity from the sun without the need for toxic ingredients that solar panels use.

Prosperity from the Use of All Our Energy Sources

Once we are able to use all of our energy sources and the N.W.O. is removed we will save hundreds and even thousands of dollars each year on our energy costs and that will help everyone become more secure and the world will be a better and safer place. Completely ending the N.W.O. will make the world a very safe and prosperous place.

Forcing Us to Use Windmills and Solar Panels

The use of windmills and solar panels are favored by the N.W.O. because they are not suitable for supporting our industries and our populations. They know this and that is what they want. By forcing us to rely on only windmills and solar energy they will force us to become dependant on them for survival because we won't be able to support ourselves. But they won't help us survive. They want to depopulate the earth and shutting down our industries and farms and heat will help them carry out their plan.

Geoengineering Is Stopping Solar Energy

Solar power is limited and their geoengineering plan is stopping what little effect solar energy supplies to us. By spraying aluminum nano particles the N.W.O. is blocking out the sun and that is significantly reducing solar panel energy output.

The Car That Runs On Water

<https://youtu.be/XXnUD2-joAc?t=1622>

The Dirty Truth About Oil

In this video, [The Dirty Truth About Oil](https://youtu.be/XXnUD2-joAc?t=1622), at the 27 minute mark, we are told about Stanley Meyer and his car that runs on water.

In the 1990's Stanley Meyer invented a process to separate water into hydrogen and oxygen that produces very large amounts of hydrogen. The process produces so much hydrogen that a car engine can be run directly from the water without storing the hydrogen in a tank first. Stanley Meyers invention worked on existing car engines. All that needed to be done was to take the spark plug out of the engine and replace it with a new spark plug that has a water hose to supply it. A high voltage and high frequency electrical pulse in the new spark plug converts the water into hydrogen that is injected into the engine and it is then ignited to run the car. This means that any car can be easily converted and all you have to do after that is put water into the tank to run the car. It can be tap water or sea water or ocean water or rain water. No pollution is produced by the engine.

This invention is well known to the N.W.O. and the politicians and activists that are part of the N.W.O. do they want to use this revolutionary invention? No. that would ruin their plan. This invention can supply clean renewable energy to the world. Water goes into the engine and water comes out. The British said that the invention was the most important discovery of the century.

Stanley Meyers water engine can also be used to produce electricity by turning electrical generators. This means that any house or building can have an engine that produces all or most of its power supply which will greatly reduce the amount of coal or natural gas needed to produce electricity. Don't forget we still have technology to produce clean energy using coal.

By producing energy where it needs to be used we can avoid power losses during transportation which future reduces the amounts of electricity that needs to be produced. Almost half of electricity produced is lost during transmission over long distances.

If you look at the wikipedia page that tells us about Stanley Meyers invention it tries to make Stanley look like a failed inventor. But the technology is in use today. They only talk about how Stanley was sued over using the 'wrong' language to describe his invention. With such a revolutionary invention why would there be such an effort to try to discredit the inventor and how come they could only attack him over the way he described the invention? The answer is because the invention is the solution the problems that they created and they have to stop it or their plan to set up their technocracy won't work.

The Sterling Engine

<https://www.youtube.com/watch?v=KbnGlcQiL1c>

This video [The Stirling Engine: A Wave of the Future](https://www.youtube.com/watch?v=KbnGlcQiL1c) about the sterling engine shows how the United States air force extensively tested a truck that used the engine and how the engine outperformed the internal combustion gasoline engine used in today's cars.

The sterling engine can be used in peoples homes just like the water engine to produce electricity and reduce the amount of energy required from coal plants.

The sterling engine can be used to produce clean energy from the sun or any other heat source. Here is an article that shows how the technology can be used.

<https://www.youtube.com/watch?v=Be3FckQoDws>

[Are Stirling Engines the Future of Renewable Energy Storage?](https://www.youtube.com/watch?v=Be3FckQoDws)

This video shows more about the sterling engine.

[This Is The World's Most Efficient Solar Electricity System, Swedish Researchers Claim](https://www.sciencealert.com/this-is-the-world-s-most-efficient-solar-electricity-system-swedish-researchers-claim)
BEC CREW

15 MAY 2015

A Swedish technology company has installed a new solar electricity generation system in South Africa's sun-soaked Kalahari desert, saying it's not only the most efficient system of its kind in the world, but it **doubles the efficiency of standard solar panels.**

Swedish-based company, Ripasso Energy, licensed the technology from the military, and together with their colossal parabolic mirror dishes, the system requires **just 2 hectares to produce a megawatt of energy.**

The N.W.O. Clean Energy Scam

<https://www.youtube.com/watch?v=1L6uB1z95gA>

Renewable Energy is The Scam We All Fell For

This video, [Renewable Energy is The Scam We All Fell For](#), describes the limitations of windmills and solar energy and the use of clean nuclear energy.

Oil Is Renewable and Crude Oil Can Be Made From Vegetation

Most oil does not come from fossils. Fossil fuel is a name that is designed to mislead you into believing that oil comes from fossils and will eventually run out. If some oil comes from fossil bones of dead animals it doesn't change the situation for the worse. Fossils are not found below 16,000 feet but oil is always being found much deeper than that, even up to 40,000 feet deep. We know that vegetation at high temperatures and high pressure can create crude oil and there are companies using algae (seaweed) to make oil in one hour from start to finish. There is absolutely no energy crisis and there never will be.

<https://www.youtube.com/watch?v=Qs0QZJ0rea0>

Algae to Bio-Crude in Less Than 60 Minutes

In this video ([click here](#)) we can see how oil is produced very fast and not over millions of years

Energy in America

<https://youtu.be/XXnUD2-joAc?t=1622>

The Dirty Truth About Oil

In this video, [The Dirty Truth About Oil](#), Leroy Fletcher Prouty who served as Chief of Special Operations for the Joint Chiefs of Staff under President John F. Kennedy tells us how the N.W.O. tricks us into thinking that oil is going to run out and how it comes from fossils.

We are told by the UN and governments that we are running out of oil and that the world is overheating because of human activity. First let's look at oil. In the seventies there was an "energy crisis". In response, the Trans Alaskan Pipeline System was built to supply oil to the lower American states from Alaska.

During the building of the pipeline an oil field was discovered in Alaska at Gull Island. In that oil field alone there is enough oil to supply America for over two hundred years plus incredible amounts of natural gas. The two hundred years even includes the projected rate of increase in consumption. There is also enough natural gas in Alaska to last 200 years which is put back into the ground at the rate of one billion cubic feet per day by using forty eight engines of the type used on 747 jet aircraft. Twenty four hours after the discovery of that oil field the discovery was classified and never reported to the world. The only reason we know about it is because Lindsay Williams who was a Chaplain at the oil field wrote a book about it titled The Energy Non Crisis. Since that time another pool of oil has been found on the north slope of Alaska as big as the one found at Gull Island.

Alaska has as much oil as in Saudi Arabia. America is energy independent and fuel should be very cheap to buy.

Considering the abundant coal supply and other oil fields in America and Alaska that are not kept secret, why are energy prices so high? Why are we fighting and dying over oil in other countries as we did in the Iraq Kuwait war? It is because those events keep us under the control of the N.W.O. and it moves them closer to their final goal. Energy prices are high and they cause us to suffer and even die but it doesn't have to be that way as you now know. Think of the prosperity and peace we could have on earth with abundant cheap energy. We have technology that allows us to burn coal that is clean. We have safe and clean nuclear energy available that is not being used as much as it could be and the dangerous nuclear energy is being used more often. But it's not being used because that would stop the N.W.O. from being built.

What About the Rest of the World? Do They Have Energy?

Every region of earth has its own abundant energy supply and we don't have to fight each other for it. Here are some of the known supplies of oil with only some mention of coal. And this is just oil. It doesn't include all the coal and clean nuclear energy and solar, water and wind power.

<https://eandt.theiet.org/content/articles/2015/11/enough-oil-for-decades-with-new-exploration-tech-bp-says/>

[Enough oil for decades with new exploration tech BP says E&T Magazine.html](#)

Thanks to investment into supercomputers, robotics and the use of chemicals to extract the maximum from available reservoirs, the accessible oil and gas reserves will almost double by 2050.

"Energy resources are plentiful. Concerns over running out of oil and gas have disappeared," said David Eyton, BP Group Head of Technology at the launch of BP's inaugural Technology Outlook.

"We are probably nearing the point where potential from additional recovery from discovered reservoirs exceeds the potential for exploration."

With the use of the innovative technologies, available fossil fuel resources could increase from the current 2.9 trillion barrels of oil equivalent to 4.8 trillion by 2050, which is almost twice as much as the projected global demand.

Further advances in exploration and technology could help the resources soar up to 7.5 trillion barrels of oil or equivalent.

https://en.wikipedia.org/wiki/Petroleum_industry_in_Russia

The petroleum industry in Russia is one of the largest in the world. Russia has the largest reserves and is the largest exporter of natural gas. It has the second largest coal reserves, the eighth largest oil reserves, and is one of the largest producers of oil. It is the third largest energy user.
